

Five reasons why you should start using Vidura Digi today

We all agree that Covid-19 pandemic has changed education forever. With education moving online, children are now able to drive learning on their own using available online tools.

We, at Vidura learning, understand the new normal. We believe that eventually online education will become an integral part of school education. We understand that children need both synchronous learning and asynchronous learning. They need to be guided and also given room to exercise independent thinking.

To give children the best of both synchronous and asynchronous learning, Vidura learning has come up with an effective yet simple solution - an innovative App, we call Vidura Digi, built on curriculum based online adaptive knowledge system.

Vidura Digi, the App, ensures that students' learning improves significantly through a right blend of curriculum-based instructional videos, adaptive practice, timed tests, analytics, performance reports and a ready-to-use integrated Live Class.

Whether you are already using an app or are looking for a curriculum-based online student solution that engages students both now during Covid-19 and later when schools fully function, here are 5 reasons why you should consider using Vidura Digi today.

1. Curriculum based instructional videos

No need to hunt and match from a billion videos. Whether your school is following CBSE, ICSE or State board, Vidura Digi has all instructional videos at one place. The concepts are taught through short, innovative and interesting videos. These videos, created by experts, use high quality animation and real-world examples and are curriculum based.

2. Bite sized learning sections

The curriculum based instructional videos are bite-sized sections perfectly tailored to the child's level and are age appropriate. This makes the videos more effective. Students readily understand these chunks of knowledge compared to the mind-numbing mountains of syllabus.

3. Supportive and adaptive Practice

Each learning section has a set of practice questions that are both supportive and adaptive. The student gets two attempts for each of the practice questions. If the student makes a mistake in the first attempt, the system helps with the hint. And if the second attempt is also wrong this system give the detailed explanation of the question so that the student can review the answer immediately for better understanding and retention. If the student does first question well, then the system presents a higher skill question. This approach increases motivation engagement and student proficiency.

4. Create timed tests in a minute

Teachers can create a curriculum-based test for their students in less than a minute. They can select the concepts and number of questions of their choice. The best part is that the system times every question in the test. This builds focus, speed and skill.

5. Detailed performance analysis

Feedback is at the heart of learning. Vidura Digi shares students' performance feedback of practice questions and tests in an easy to understand report with both the teacher and the student. The student report shows the skill set gained, areas to improve and lesson performance. Average scores across lessons, average time spent, average percentage and other details are part of the Teacher report.

The reports help teachers and students take relevant remedial measures.

Bonus:

Integrated live class with recording facility

No more sending of links across multiple platforms. Teachers can set up the live classes at the click of a few buttons right in Vidura Digi itself and students can readily join them. Should any student miss the live class they need not worry. They can go through the recording of the live class in the app itself. With flexible timings and a maximum capacity of 250 per class, Vidura Digi live class is an ideal platform for teachers and students to connect, communicate and collaborate.
